

Destroyed aircraft

Destroyed Aircraft: These exhibit chaotic and irregular radar returns. The structural collapse eliminates the standard corner reflectors, resulting in a scattered distribution of bright pixels (debris) and the complete loss of the original coherent shape.

Intact Aircrafts

Intact Aircraft: These display strong, regular, and coherent backscatter patterns. The intact metallic structures and right angles (e.g., between the fuselage and wings) act as distinct corner reflectors, preserving a clear, recognizable geometric signature.
